Your Quality CBD Checklist

When choosing any hemp-derived product, look for:

- ✓ THIRD PARTY LAB TESTING with COA (Certificate of Analysis) Product should specify total amount of CBD content and show testing for impurities like pesticides, heavy metals and other contaminants

- ✓ CLEAN SOIL – Know where your hemp is grown! Hemp absorbs contaminants from the soil, air and water so it's important to start with clean soil

- ✓ USDA CERTIFIED ORGANIC – Have peace of mind knowing your hemp was grown in the absence of herbicides and pesticides

- ✓ CO2 EXTRACTION – Environmentally friendly, CO2 preserves cannabinoids better than solvents like ethanol and butane

- ✓ HEMP FLOWER – the flower is where the vast array of cannabinoids are found. "Ariel parts" include the fibrous stems and leaves which have negligible amounts of cannabinoids.

- ✓ COCONUT OIL – Coconut oil can carry more CBD molecules and ultimately deliver more cannabis to our cells for absorption than other carrier oils. It's the most bioavailable with no taste or smell

Always look for USDA-certified organic CBD brands that are transparent about where their hemp is coming from and are able to provide lab reports through third-party testing. Ask to see the USDA-certified organic seal and always make sure you know where the hemp is being farmed and who processes it.

For personal guidance, fill out my quick product match quiz and I'll get back to you to set up a free 15 minute consult!
